

RAYSCAPE

The powerful extra brain **Aiding your imaging interpretation.**

**50K X-rays/
month**

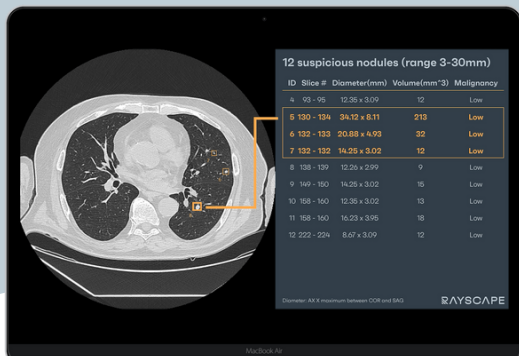

**20K CT
scans/month**

**6 European
countries**

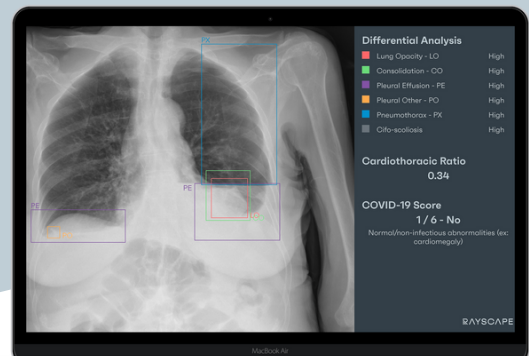

**100+ medical
institutions**

RAYSCAPE LUNG CT

The complex AI assistant for lung CTs that identifies and tracks pulmonary nodules

- ✓ Identifies lung nodules and measures their diameter and volume
- ✓ Localizes the nodules on the slices and identify their lobar location
- ✓ Compares lung nodule evolution and creates a report including VDT & growth

RAYSCAPE CXR

The digital assistant that can localize 140+ thoracic pathologies on chest X-rays.

- ✓ Detects and locates more than 140 pathologies grouped into 17 classes
- ✓ Generates enhanced visualizations of subtracted & suppressed bone tissue
- ✓ Automatically calculates the cardiothoracic index
- ✓ Prioritizes patients according to the identified pathologies
